

Level Up Faster in Pokémon GO: The Easiest Path to Evolving All Eevee Forms for Level 42

Reaching level 42 in Pokémon GO presents a unique challenge for trainers: evolving Eevee into each of its distinct forms. While this task may seem daunting, a straightforward method exists to guarantee each evolution, alongside alternative approaches for those who have already used this trick.

The Nickname Trick: A One-Time Guarantee

The simplest and most reliable way to control Eevee's evolution is by using a specific nickname. This method works once for each of Eevee's eight evolutions. To use this trick, simply rename your Eevee to the corresponding name from the list below and then evolve it with 25 Eevee candies.

Evolution	Nickname
Vaporeon	Rainer
Jolteon	Sparky
Flareon	Pyro
Espeon	Sakura
Umbreon	Tamao
Leafeon	Linnea
Glaceon	Rea
Sylveon	Kira

Export to Sheets

Important Note: Before evolving, ensure the silhouette of the desired evolution appears on the evolve button. If it shows a question mark, the nickname trick may not work, and you could get a random evolution. This is a one-time use trick for each evolution, so use it wisely.

Alternative Evolution Methods

For trainers who have already utilized the nickname trick, there are specific actions you can take to obtain each of Eevee's evolutions.

Vaporeon, Jolteon, and Flareon: These three original evolutions are random. After using the nickname trick, evolving an Eevee with 25 candies will result in one of these three forms at random.

Espeon: To evolve Eevee into the Psychic-type Espeon, you must first make it your buddy and walk with it for 10 kilometers. Once this distance is covered, evolving that Eevee during the daytime (indicated by a sun icon in the game) will yield Espeon. The Eevee must be your buddy at the time of evolution.

Umbreon: Similar to Espeon, you must walk with your Eevee buddy for 10 kilometers. To obtain the Dark-type Umbreon, you must evolve it during the nighttime (indicated by a moon icon in the game). The Eevee must also be your buddy at the time of evolution.

Leafeon: To get the Grass-type Leafeon, you need to be within the radius of a PokéStop that has an active Mossy Lure Module. You can then evolve any Eevee with 25 candies to get Leafeon.

Glaceon: For the Ice-type Glaceon, you must be within the range of a PokéStop with an active Glacial Lure Module. Evolving an Eevee with 25 candies under these conditions will result in Glaceon.

Sylveon: To obtain the Fairy-type Sylveon, you need to set Eevee as your buddy and earn 70 hearts with it. Once you have reached this friendship level, the option to evolve it into Sylveon will appear.

By following these methods, you can systematically acquire each of Eevee's evolutions and complete the necessary task to advance to level 42 in Pokémon GO.
